(54) Title: A RADIO BASE STATION INTERFACE

(57) Abstract: The present invention relates to an interface in a Radio Base Station for separating its functionality into a first part, which solely relates to the functionality of the radio network, and a second part, which solely relates to the radio part, i.e. the airborne part of the transmission. The interface provides a minimised bandwidth and comprises one or more user data links for uplink and downlink, a control and supervision link, and a synchronisation link.
